Experience

JPMorgan Chase & Co. | Pune

April 2026 – Present

Software Engineer 2

Pune

CHASE TRAVEL

- Developed and enhanced features for the **Chase Travel** platform using **Angular 21, TypeScript, RxJS, HTML5, and SCSS** within a **Micro Frontend architecture**, delivering scalable and modular applications. Built reusable and modular UI components using **PrimeNG** and custom shared libraries.
- Built reusable UI components and independently developed Micro Frontend modules, improving maintainability and enabling faster feature delivery.
- Optimized application performance through lazy loading, code splitting, and modern Angular features, ensuring a seamless user experience.
- Collaborated with Product Owners, QA, UX designers, and backend teams in an Agile environment to deliver high-quality, production-ready solutions.
- Resolved production issues, participated in code reviews, and contributed to improving application reliability and code quality.
- Tech Stack:** Angular 21, TypeScript, RxJS, HTML5, SCSS, Micro Frontends, REST APIs, Git, CI/CD.

Impetus

February 2025 – April 2026

Sr. UI Engineer

Indore

Fusion Ui (Client- Clear Trail)

- Working on **Fusion UI** project, developing dynamic and scalable enterprise applications using **Angular 17+**.
- Integrated **ngx-quill** rich text editor to enhance user input and document editing capabilities.
- Built reusable and modular UI components using **PrimeNG** and custom shared libraries.
- Implemented efficient state management** to minimize redundant API calls and improve overall application performance.
- Optimized performance through **lazy loading, efficient change detection, and code-splitting** strategies.
- Coordinated closely with **Product Owners (PO), QA, and Backend** teams to ensure seamless feature delivery and high-quality releases.
- Contributed to improving **application accessibility, UI consistency, and user experience** across multiple modules.
- Tech Stack – **HTML, SCSS, TypeScript, Angular17+, lib(PrimeNg , Bootstrap, ngx-quill)**

Persistent Systems

September 2021 – February 2025

Sr. Software Engineer

Indore

WK Axxess Angular Migration

- Migrated application from AngularJS to Angular 14, reducing code redundancy and improving maintainability
- Designed and implemented a **web shared library** in Angular 15 to consolidate common components and services, including:
 - Amount Field Component:** A reusable input field for handling currency and numeric inputs.
 - Toaster Notification Service:** A centralized service for displaying toast notifications.
 - Message Box Service:** A service for displaying modal dialogs and alerts.
- Ag-Grid Wrapper:** Created a custom wrapper around Ag-Grid to simplify its usage and ensure consistency across the application.
- Published the shared library to the client's **private NPM repository**, enabling streamlined development across multiple projects.
- Achieved 40% faster rendering by replacing Kendo UI Grid with Ag-Grid.
- Optimized performance by implementing lazy loading and eliminating re-renders, reducing load times by 50%.
- Utilized RxJS for reactive programming and managing asynchronous data streams.
- Conducted unit, integration, and user acceptance testing, ensuring 100% functionality and reliability.
- Tech Stack – **HTML, CSS, TypeScript, Angular.**

WK CPELINK

- Successfully transitioned the legacy AngularJS portion of our product, originally composed of AngularJS + PHP, to the latest version, Angular 13, driven by the need to address AngularJS depreciation and improve performance, maintainability, and long-term support.
- Initiated the migration by updating project dependencies for compatibility with Angular 13. Established a new Angular 13 project using Angular CLI, configuring it to meet specific requirements.
- Aligned with the requirement to maintain the same design and functionality as the old application.
- Meticulously executed the code migration process, transferring individual components and services from AngularJS to Angular 13. This involved rewriting code, adjusting templates, and updating APIs as necessary. Rigorous testing was conducted on each migrated component to ensure functionality and reliability.
- Tech Stack – **HTML, CSS, TypeScript, Angular.**

Education

Rajiv Gandhi Proud yogiki Vishwavidyalaya, Bhopal

August 2017 – September 2021

Bachelors of Technology in CSE

75 %

Technical Skills

Languages: Typescript, JavaScript, Java. **Frontend**
Technology: Angular (17+/15/14/13) React.js,
TypeScript, HTML, CSS, SCSS, RxJs, PrimeNg.
Backend Technology: Node.js.
Database: MongoDB.
Others: Git, SCSS, Bit Bucket, JIRA, ASURE, NPM, CI/CD, Debugging.

Achievements

- Star of the Month (July) in Impetus.
- Bravo-Individual Award in Persistent Systems.
- Top Talent FY23 in Persistent Systems.
- Bravo -Team Award in Persistent Systems.

Certifications

- Frontend (Angular) -Developer Certificate by Persistent Systems.
- GenAi foundation and Practitioner Certificate by Persistent Systems.
